Travelport

Sept 2016 - Present

Hospitality - Project II

Software development engineer

- Big data pipeline set-up, flat-file is passed through a proxy, then converted to a more robust JSON object that then is made available to customers.

- Designed a new implementation of CI/CD through Jenkins to deploy Node.js for the first time in the company.

- Deployment of the services in a Linux Red Hat server using Docker containers.

- Developed and implemented a Java servlet to act as a secure proxy through internal firewalls

- Set up the deployment of new Kakfa servers to deliver Big Data.

- Created an API that was able to connect and monitor our Kafka consumers

- Designed variable tests with both JUnit and Mocha.

- Source control Gitbucket.

- Scrum project/ JIRA confluence tracking

- Built automated test with complete coverage with Mocha.js

Hospitality - Project I

Software development engineer

- Modernizing old Java monolith-style code to micro services utilizing RESTful and SOAP services.

- Deployment of Java 8 through Spring-Boot services and CI/CD via Jenkins

- Designed multiple JUnit tests

- Source control Gitbucket

- Kanban project/ JIRA confluence tracking

Hospitality - Special project

Software development engineer/ Co-founder

- Internal incubator, developed and implemented a front end to easily manage a repository of information one of the biggest clients wanted. Idea funded and transferred to a full team.

- Deployed and managed multiple AWS and RDS servers

- Designed and implemented MySQL database
- Designed and implemented a Java backend with Spring MVC to connect to database
- Source control Github
- Scrum project/Slack tracking

National Security Agency - NSA/CSS Colorado
